

## IT Support

### Computer Cleanup

STLs can use a checklist to clean up and speed up their family's devices by emptying the trash, uninstalling unnecessary programs, deleting duplicate files, and ensuring the operating system is up to date.

### App Research

STLs can research different collaboration apps for classroom use. These may include video, voice, and screen sharing capabilities. STLs can evaluate software accessibility, features, and ease of use for teachers, then make recommendations to their school or district.

## Content Creation

### Surveys & Polls

STLs can create surveys to take stock of how students are handling the pandemic, or poll teachers about what apps are working best for them and share the results.

### Posters & Graphics

STLs can make posters describing how to wash hands, where to find resources, how-to diagrams for common technology issues, troubleshooting tips, and much more.

## Mentoring

### Teaching About Tech

STLs can virtually meet with teachers and walk them through how to use specific software.

### How-To Videos

STLs can create How-To videos on just about anything, especially how to fix common problems with district-issued devices.
